                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 5, Application US/08696731

Sequence 5, Application US/08696731

Patent No. 5955347

GENERAL INFORMATION:

APPLICANT: LOWE, JOHN B.

TITLE OF INVENTION: METHODS AND PRODUCTS FOR THE SYNTHESIS

TITLE OF INVENTION: G. LIGOSACCHARIDE STRUCTURES ON GLYCOPROTEINS,

TITLE OF INVENTION: GLYCOLIPIDS, OR AS FREE MOLECULES, AND FOR THE ISOLATION

TITLE OF INVENTION: OF CLONED GENETIC SEQUENCES THAT DETERMINE THESE STRUCTU

NUMBER OF SEQUENCES: 14

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    6493

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pure or recombinant chemokine CKDLR201.1 - useful, e.g. for treating profile ways. Associated by the compliant chemokine CKDLR201.1 - useful, e.g. for treating prinflammation and as antiviral agents

PS Claim 2.7 Page 64-65. 77pp: English.

C The present sequence is mouse G-protein coupled receptor 69A08 #1

C The present sequence is mouse G-protein coupled receptor for a used to protein which comprises a plurality of epitopes. Host cells containing vectors comprising a nuclectide sequence encoding the protein are used to produce recombinant protein. Treatment of a cell, particularly neuron, compared pagents is used to control physiological development, e.g.

C a receptor responsive to CKDLR201.1 chemokine protein, with an company of calcium ion influx, a chemoattractant response, morphology, alteration of calcium ion influx, a chemoattractant response, morphology, calcration of calcium ion influx, a chemoattractant response, morphology, phosphoinositide lipid turnover or an antiviral response, morphology, compressing antigenic peptides. Antibodies (Ab) directed against the corpuses, e.g. for detecting and isolating related sequences and for expressing antigenic peptides. Antibodies (Ab) directed against the corpused continual drugs; to inhibit chemokine/receptor activation; (when coupled to a toxin or radiolsotope) for killing specific cells, and to raise antibodies. CRDR201.1 protein and GPCRs and compounds which bind them can be used to treat inflammation, e.g. asthma: as antiviral agents, and to treat abnormal cell proliferation, regeneration, industry and activation and attophy. Therapeutic agents are administered orally, by induction and accoptance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             44; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GRSLIGRLETOPPI-----TGKG-----VPVEPGF------SIDEFSASIL 71
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example; Fig 10: 57pp: English.

A cDNA library from a mouse stomach was constructed in lambda gilo and screened with a probe encompassing the Cl40 genomic clone (see Q84557). A single phage clone was isolated and cut with EcoRi. The insert was cloned in pBluescript and pSG5 and sequenced. The complete nt sequence and deduced AA sequence is given in Q84559 6 R66992. 5' RACE resulted in the addition of only 27 pps to the 5' end of the apparent coding region differs from the 5' end of the CNF of genomic DNA; it is believed that the 5' end of the cDNA sequence is correct.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GFSLSGGTQT-PSVYDESGSTGGGDDSTPSILPAPRGYPGQVCANDSDTLELPDSSRALL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        გ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                        Vector for expression C140 cell surface receptor in host cell useful to identify C140 agonist and antagonists, which are an utility creatives and elevators of blood pressure, respectively Example 4: Fig 10A-B: 60pp; English.

W01954 represents the murine C140 receptor (C140R). DNA encoding C140R W01954 represents the murine C140 recombinant expression of C140R in a suitable host cell, i.e. by removing the native expression-control casquences and replacing them with control sequences operable in the host.

CC sequences and receptor can be expressed on the surface of occytes, this provides a good assay system for identifying agonists/antagonists.

CC of the "seven pass" transmembrane receptor superfamily (peptide chain of the receptor passes through the call membrane seven times, producing seven transmembrane regions within the receptor molecule). The C140 receptor is involved in controlling blood pressure and are therefore useful in pharmaceuticals for the treatment of hypotension (low blood pressure). Conversely agonists (see W01914-W01941) of C140 are useful in pharmaceuticals for the treatment of hypotension (low blood pressure).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diagnostic applications.

Disclosure; Fig 1; 5/pp; English.

A mouse cosmid genomic library (obtd. from Dr R.A Wetsel, Washington Only. School of Medicine, 5t Louis, Missouri) was screened with two 32P-labeled oligos corresp. to bp 190-249 and 742-801 of the bovine substance K receptor cDNA. In one of the clones isolated (C140) the hybridising region was localised to a 3.7 kb Peti fragment. This fragment was subcloned into pBluescript vector. The hybridising and adjacent regions were sequenced. The nt sequence and the deduced AA sequence 395 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    13 GFSLSGGTQT-PSVYDESGSTGGGDDSTPSILPAPRGYPGQVCANDSDTLELPDSSRALL 71

cignal peptide (see features table). DNA encoding C140R may be engineered so as to allow the recombinant expression of C140R in a suitable host cell, i.e. by removing the native expression-control sequences and replacing them with control sequences operable in the host. Such a recombinant receptor can be expressed on the surface of occytes, this provides a good assay system for identifying agonists/antagonists of C140R. The C140 receptor is a G-protein linked receptor and a member of the "seven-pass" transmembrane receptor superfamily (peptide chain of the receptor passes through the cell membrane seven times, producing seven transmembrane regions within the receptor molecule). The C140 receptor is involved in controlling blood pressure. C140 antagonists (see W01942-W01951) are useful to inhibit signalling from this receptor, resulting in an increase in blood pressure and are therefore useful in pharmaceuticals for the treatment of hypertension (low blood pressure). Conversely agonists (see W01914-W01941) of C140 are useful in pharmaceuticals for the treatment of hypertension (high blood pressure).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11;

DNA encoding protease-activated receptor 3 - for detection of specific agonists and antagonists, potentially useful for treating te.g. thrombosis, atheroscierosis, inflammation etc.

Claim 3; Page 41-42; 74pp; English.

C This polypeptide comprises human protease-activated receptor 3 (PAR3), a cell surface protein which is specifically activated by thrombin or a thrombin agonist, thereby activating signalling events such as phosphoinositide hydrolysis, calcium ion efflux and platelet aggregation. Its amino acid sequence was deduced from an isolated cDNA clone (see W5140?), and shows homology to human PAR1 and PAR2 (see W51405) is also provided. Also claimed are vectors, host cells and an assay device. Host cells are used to screen compounds for their ability to act as agonists or antagonists of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the effects of thrombin-pray interaction. Agonists are used to treat wounds, thrombin-pray interaction. Agonists are used to and other thrombin activated disorders. Antagonists see Wild15-21) are used to control blood coaquiation and thereby to treat heart attack and stroke. They also mediate inflammatory and proliferative responses to injury as occur in wound healing, atherosclerosis, sequence 374 AA;

New DNA encoding recombinant C140 receptor - and novel agonists and antagonists and specific antibodies with therapeutic and diagnostic applications.

The availability of genomic DNA encoding the mouse protease C140 receptor (see 084557) permitted the retrieval of the corresp. C140 receptor (see 084557) permitted the retrieval of the corresp. C140 receptor (see 084557) permitted the retrieval of the murine clone as a probe. The recovered human gene including the DNA sequence and the deduced As sequence are shown in 084558 & R66921. Subsequent carported that the human C140 gene is located in the same region of the long arm of chromosome number 5 (5412-5413) as has been reported for the human thrombin receptor gene.

Human C140 receptor, with putative signal sequence.
C140 receptor; G-protein linked; coupled; seven pass; agonist;
antagonist; hypertension; hypotension; blood pressure.
Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "putative signal peptide, differs f
signal peptide encoded by a cDNA clone of
this receptor (see W01955), the signal
sequence given for the cDNA clone is
believed to be the correct sequence"

Example 2; Fig 2A-B; 60pp; English.

WO1953 represents the human C140 receptor (C140R), including a putative WO1953 represents the human C140. DNA encoding C140R may be adjanal peptide (see features table). DNA encoding C140R may be engineered so as to allow the recombinant expression of C140R in a suitable host cell, i.e. by removing the native expression-control sequences on and replacing them with control sequences operable in the host. Such a recombinant receptor can be expressed on the surface of occytes, this provides a good assay system for identifying agonists/antagonists of C140R. The C140 receptor is a G-protein linked receptor and a member of the "seven-pass" transmenbrane receptor superfamily (peptide chain of the receptor passes through the cell membrane seven times, producing seven transmenbrane receptor molecule). The C140 artagonists (see W01942-W01951) are useful to inhibit signalling from this receptor, is involved in controlling blood pressure and are therefore useful in pharmaceuticals for the treatment of hypotension (low blood pressure). Conversely agonists (see W01914-W01941) of C140 are useful controlling for the treatment of hypotension (high blood controlling to the treatment of hypertension (high blood controlling to the treatment of hypertension (high blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SRALLLGWVPTRLVPALYGLVLVVGLPANGLALWV-LATQAPRLPSTMLLMNLATADLLL 125

e.g. thrombosis, atherosclerosis, inflammation etc.

Claim 3: Page 39-40: 74pp; English.

This polypeptide comprises mouse protease-activated receptor 3

This polypeptide comprises mouse protein which is specifically activated by the coll surface protein which is specifically activated by thrombin or a thrombin agonist, thereby activating signalling thrombin or a thrombin ostild hydrolysis, calcium ion efflux and platelet aggregation. Its amino acid sequence was deduced from an isolated cDNA chone (see V07372). The human PAR3 amino acid sequence (see W51406) is also provided. Also claimed are vectors, host cells and an assay device. Host cells are used to screen compounds for their ability to act as agonists or antagonists of the effects of thrombin-PAR3 interaction. Agonists are used to compounds thrombins, atherosclerosis, restenosis, inflammation and other thrombin activated disorders. Antagonists (see W51415-21) are used to control blood coagulation and thereby to treat heart cattack and stroke. They also mediate inflammatory and proliferative responses to injury as occur in wound healing, atherosclerosis, crestenosis, pulmonary inflammation (ARDS) and glomerulosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CPEDSISTLHVNNATIGYLRSSLSTQVIPAIXILLFVVGVPSNIVTLHKKLSLRTKSISLV 128

Example; Fig 11; 57pp; English.

A human intestinal tumour conA library was subjected to PCR using princes designed from the genomic clone (see Q84558) and the amplified fragment was cloned in pSG5 and sequenced. There are four AA differences between the cDNA encoded sequence and that an encoded by the genomic DNA. The genomic DNA sequence are given in Q84560 & R66923.
This polypeptide comprises human protease-activated receptor 2 (PAR2). The physiological activator of PAR2 remains unknown; it is not activated by thrombin. The invention relates to novel mouse and human PAR3 (see W51405-06) that show homology to PAR2 which are specific receptors for thrombin. They can be used to soreen for specific agonists and ancagonists of thrombin useful e.g. for treating atherosclerosis, thrombosis and inflammation. Sequence 394 AA;

Nergola 13.20 (100 each section cold cell surface receptor in host cell section for expression C140 against and antagonists, which are useful to identify C140 against and antagonists, which are mathypertensives and elevators of blood pressure, respectively Example 5; F19 11A-B; 60pp; English.

Wol955 represents the human C140 receptor (C140R). DNA emcoding C140R may be engineered so as to allow the recombinant expression of C140R in a suitable host cell, i.e. by removing the native expression of C140R in a suitable host cell, i.e. by removing the native expression of C140R in a suitable host cell, i.e. by removing the native expression of C140R in a suitable host ceeptor can be expressed on the suitable of cold can be expressed on the suitable of cold can be expressed on the suitable of cold can be expressed on the suitable in the host.

C100R. The C140R receptor is a G-protein linked receptor and a member of the receptor passes through the cell membrane seven times, producing seven transmembrane regions within the receptor molecule). The C140 receptor is involved in controlling blood pressure clud antagonists (see W01942-W01951) are useful to inhibit signalling from this receptor; resulting in an increase in blood pressure and are therefore useful in pharmaceuticals for the treatment of hypertension (low blood pressure).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RLLL--VAACFSLCGPLLSARTRARRPESKATNATLDPRSFLLRNPNDKYEPFWEDEEKN 62
                                                                                                                                                                                                                                                                                                                                                 DNA encoding cell surface receptor for thrombin - useful for determining thrombin in diagnosing e.g. cardiovascular diseases, also to treat wound healing, restenosis etc.

Disclosure; Fig 1: 81pp; English.

The TR DNA sequence can be used in the prepn. of diagnostics to determine thrombin levels in samples, and screening tools for candidate substances which affect thrombin activity in vivo.

Thrombosis may be diagnosed in a mammal by measuring the presence, absence or amt. of the cleaved activation peptide of the TR. Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RLLLWPLVLGFSLSG---GTQTPSVYDESGSTGGGDDSTPSILPAP------RG

                                                                                                                                 DNA encoding procease-activated receptor 3 - for detection of specific agonists and antagonists, potentially useful for treating exp. thrombosls, atherosclerosls, inflammation etc.

Example 1; Page 42-43: 74pp: English.

This polypeptide comprises human protease-activated receptor 1
(PAR1), a receptor that mediates thrombin signaling. The invention relates to novel mouse and human PAR3 (see WS1405-06) that show homology to PAR1 and which are specific receptors for thrombin. They can be used to screen for specific agonists and antagonists of thrombin useful e.g. for treating atherosclerosis, thrombosis and inflammation.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note-"Organ: colon; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_Col0 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hypridization reaction. The driver was PCF-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 1144584-1145351).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    M.D., Ph.D. CDNA Library Preparation: M. Pollowing HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library clonerDs 1057416-1061255, and li44584-1145351).
